Freedom For Them, Peace-of-Mind For You

With daily activities taking family members in different directions, it's important to know where everyone is going and that they've arrived safely. Pocketfinder[®] Vehicle lets you know in real time your families whereabouts. Whether it's school, sports practice, work, or after-school activities, you can track progress and receive notifications through a web-based interactive user portal.

Easy to Install

PocketFinder[®] Vehicle installs in minutes. Simply connect the power and ground wires to the battery and mount the device anywhere inside the car or engine compartment. Internal antennas eliminate the need for hard wired or external antennas, and the device is fully-sealed, dust proof, and waterproof. An internal back-up battery ensures that you never lose a connection.

Easy to Use

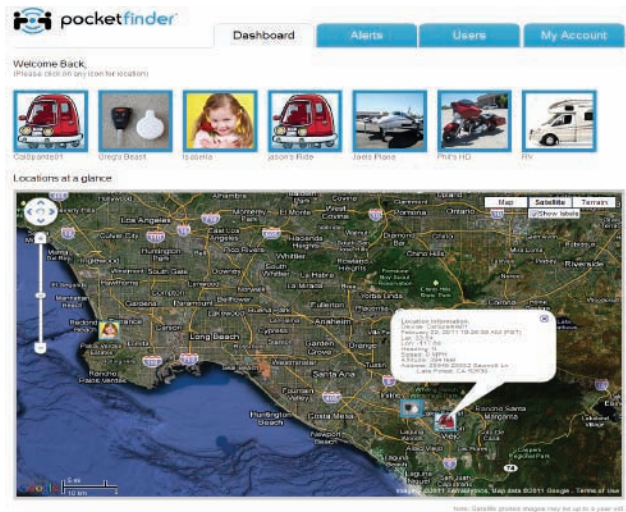

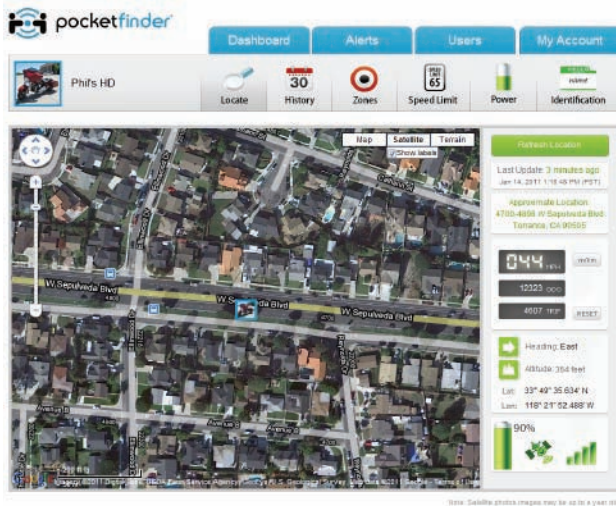

PocketFinder Vehicle uses advanced GPS technology to pinpoint locations on a satellite map. The user portal is accessible from a secure computer login or web-enabled cellular device, and provides real-time information on the location of your vehicle, and the speed and direction that it's traveling. You can even receive alerts when vehicles enter or exit specific geographic zones or exceed speed limits. Monitor multiple vehicles on one account – even motorcycles, snowmobiles, and boats! The device's location, speed, and direction with alert notifications sent via e-mail is included in all configurations (additional configurations are available).

Why PocketFinderVehicle:

- Peace of mind knowing where your loved ones are
- Easy access from any web-enabled phone, device or computer
- Enhance the safety and security for those you love
- Easy to view 30 day location history
